## MESSERSCHMITT ME 163 COMPONENT DRAWINGS

NASM Archives Accession No. XXXX-0055

---

### HOW TO ORDER COPIES OF DRAWINGS

---

The Messerschmitt Me 163 "Komet" was the world's first operational rocket-propelled fighter aircraft. NASM's collection of Me 163 drawings consists of close to 2000 diazo prints of the original drawings prepared in 1944/45. **You may use this form to obtain a price quote for individual drawings (by drawing number).**

#### HOW TO ORDER COPIES OF MESSERSCHMITT ME 163 DRAWINGS:

Due to the nature of the collection, there are several steps you must follow to obtain specific Me 163 drawings. You must:

1. Review the drawing list below carefully. **Because of the large number of orders we receive and the limited number of staff available to fill these orders, you may request a maximum of twenty-five (25) drawings per order, with a limit of one order in process per individual or organization.** We recommend that you decide your priorities for ordering individual drawings based on the status of your own restoration or reconstruction project. (What part of the aircraft are you most interested in? Where would you like to start? Nose? Tail? Landing gear?) *The NASM Archives is not able to make these decisions for you.*
2. When you have decided which drawings you would like to order, please complete the Price Quote Request form on the other side of this page. Be sure to give us your name and mailing address. **Please make your request by drawing number and title, listing selected drawings in drawing number order from lowest to highest.** Please mail your completed request for *no more than 25 drawings* to the address below.
3. After the NASM Archives has reviewed your request, you will receive a customized price quote which will enable you to order copies of the drawings on your list. Why do you need to receive a price quote before you send money? Me 163 drawings come in a wide variety of sizes; the cost of each copy drawing is calculated at a standard rate per square foot.
4. Based on the customized price quote, decide which Me 163 drawings you would finally like to order and follow the instructions on the price quote form to obtain duplicates.
5. Your duplicate Me 163 drawings will be sent via UPS or U.S. mail.

**VERY IMPORTANT!!! Do not send payment until you receive a cost estimate from us.** You will be provided with a price quote for copies of the drawings which you have requested. We ask that you return a copy of the price quote with your selections noted as your final order.

**YES, we know that this seems complicated, and NO, there isn't any other way you can do this. Please be advised that the NASM Archives Division is not able to hold money on account for our customers, or to carry credit from order to order, or make drawing selections for you.**

**NOTICE:** *These items are provided for historical and reference use only. The National Air and Space Museum and its donors assume no liability for any loss or damage resulting from or in any way connected to other use of this information. Not for commercial use or further dissemination.*

Mail this completed form (do not send any payment) to:

Messerschmitt Me 262 drawings (armament and payload section)	68
Messerschmitt Me 262 drawings (miscellaneous equipment section)	68
Messerschmitt Me 309 drawings (power plant section)	68

**Notes:**

(1) Drawings are arranged by RLM (German Air Ministry) drawing number. The drawing number format is: [Type].[Baugruppen (assembly)]-[Subassembly].[Component], as "8-163.110-001.005" : 8-163 = type (aircraft, type 163); 110 (baugruppe); 001 (subassembly), 005 (component). Drawings numbers containing "H" or "Z" are special types of subassemblies. "H" indicates a **Hilfsgruppen** - "Support Group" - a subassembly of components only; "Z" indicates a **Zwischengruppen** - "Intermediate Group" - a subassembly of other subassemblies. In the listing below, Hilfsgruppen and Zwischengruppen appear before components of the same subassembly. The abbreviation "bl." indicates a sheet number ("blatt").

When two number are separated by a slash (/) this indicates that the drawing covers two part numbers, such as: "8-163.110-001 H007/H008" = "8-163.110-001 H007" **and** "8-163.110-001 H008." Such numbers may occur at any level (Baugruppen, Subassembly, Component, Hilfs- or Zwischengruppen; see for instance the Baugruppen listed above). On the drawing, the repeating sections of the number are written once, while the changing section are written in their normal place, stacked vertically (in this case, 8-163.110-001 would be written once, H007 and H008 would be written at the end, one above the other).

When two numbers are separated by "bis" ("through"), this indicates that the drawing covers all intervening part numbers (inclusive). This normally occurs only at the component level.

(2) The date shown is the date of the most recent revision, in ISO 8601 (YYYY-MM-DD) format, with the revision letter (if any) shown in parentheses.

(3) The German title shown is as given on the drawing. The English translations shown in square brackets are mainly based on literal translations of the titles based on modern German usage, rather than mid-20th century technical German.

(4) The information in this list has been partially updated since the collection was originally cataloged. As a result the accuracy of the data may vary from item to item, reflecting the changes to our cataloging methods and data standards over time. We will continue to update the catalog and list as the opportunity arises.
